When Protection Against Spraying and Splattering of Body Fluids is Important...

Until now, there has been no more affordable, comfortable and reliable eye protection for workers in the health care industry. Lightweight and fog-resistant, **I-SPOSE®** Face Shields may be worn through hours-long procedures, with or without surgical masks (Shield will protect the integrity of mask from splattering or moisture). Its low cost encourages its use for those brief but significant exposures to risk. The shield will not fall off and is completely adjustable. It may even be worn over glasses! It will not

cause pressure behind the ears and stays away from eyelashes and other facial features. The design allows adequate ventilation, reducing heat buildup. **I-SPOSE®** eliminates the need for cleaning, thus reducing the risk of cross-contamination. Best of all,

I-SPOSE® costs less than what you are probably paying now. The **I-SPOSE®** product line is FDA 510K listed. (See other side for details and ordering information)

When Protection Against Spraying and Splattering of Body Fluids is Important...

Protection from Communicable Disease

Guidelines of the Center for Disease Control, OSHA regulations, and increased awareness in the health community demand greater efforts to protect care givers from communicable diseases.

Current practice requires that eye protection be worn in any situation where there is a possibility of the spraying or splattering of body fluids. In health care, this possibility is always present.

But until now, there has been no reliable, convenient and *economical* way of dealing with eye protection for workers in the health care industry.

Low Cost and Convenience Encourages Safety

The I-SPOSE disposable eye shield was designed by a health care professional to meet these special needs. The low cost of a disposable I-SPOSE eye shield eliminates any need for cleaning and reduces the chance of cross-contamination.

Lightweight and fog resistant, I-SPOSE may be worn comfortably through hours of long procedures, but its low cost encourages its use for brief but significant exposures to risk.

A box of fifty I-SPOSE eye shields takes little space on the scrub sink, supply cart, isolation cart, or venipuncture tray.

For Everyone

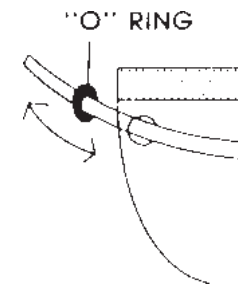

Completely adjustable, I-SPOSE is for everyone. Wear it with or without regular eyeglasses. It won't slip down or restrict your field of vision. I-SPOSE weighs only a frac-

tion of an ounce, so you'll hardly know you're wearing it.

I-SPOSE is a necessary protection for the OR, ER, or in the wards, the dental office or laboratory, the paramedic or EMT kit.

Protect yourself and those who work with you. Use I-SPOSE for convenient, effective and affordable eye protection.

IMPORTANT – PLEASE READ Instructions for Use

- 1) Handle I-SPOSE™ with strip border. Do not touch optical area.
- 2) Place I-SPOSE™ on face after surgical mask is in place.
- 3) Wearer can adjust tightening straps by pulling end of strap forward through "O" ring for individual comfort.
- 4) Wearer can adjust straps for individual comfort by sliding "O" ring along tubing.
